Lecturer Feedback & Review

Project Documentation — Section 2: Lecturer Review

> Summary of Feedback:
> The lecturer expressed initial approval with no objections to the current project direction, while emphasizing key prerequisites regarding data authenticity, volume, and analytical depth for forecasting.

1. Detailed Lecturer Feedback & Evaluation

• **General Approval:** The lecturer confirmed there are no issues or objections to continuing the project as currently planned.

• **Data Authenticity:** The dataset must consist of authentic, real-world data rather than mock or generated data.

• **Data Size & Schema:** Specify the number of columns/attributes across the dataset, noting that the overall dataset contains approximately 7 million records.

• **Analytical Value & Forecasting:** Ensure the dataset enables strong analytical insights and evaluate whether forecasting models can be effectively applied.

• **Open Data Preference:** High importance is placed on utilizing verifiable, real open data sources.

2. Suggested Improvements & Action Items

Action Item / Topic	Details & Implementation Recommendations
Schema & Attribute Verification	Document column counts and data types to ensure readiness for data relationships and Star Schema modeling.
Forecasting & Advanced Analytics	Develop predictive models for accident trends and build executive dashboards highlighting primary insights.
